# Nuclear Energy

-THE BETTER ENERGY-

*We are an initiative to promote awareness about the peaceful uses of Nuclear Energy. Embracing Nuclear Energy is the step that will take us closer to a safer and a greener environment. No carbon dioxide emissions, no accumulations of sulfur, least amount of land required, and a surprisingly low quantity of waste produced -- all indicating the need for a paradigm change in our attitude towards this better energy.*

*All safety related fears and apprehensions have become outdated and the Nuclear Energy community has developed enough expertise to be able to provide the world with a low-risk, cheaper and an environment-friendly power -- Nuclear Power.*

*Run by graduate students at the University of Notre Dame*
